

Technical Specifications

Laundry

The Bloomsbury Theatre has a small costume running room and laundry. This space is equipped with butler sink, twin tub washer, washing machine, condenser tumble drier, iron/ironing board and sewing machine

Bloomsbury Theatre

Configuration

The theatre is an end-on proscenium arch theatre seated in the continental style with a curved, nearly circular balcony. There is a permanent control position at the rear of the stalls and a follow spot room at the rear of the side seating. There are two forestage elevators to allow for a stage apron, and/or orchestra pit. The standard configuration is Forestage Elevator 1 at stage height, and Forestage Elevator 2 at auditorium level. The fly floor is on stage left, with a small workshop and scene dock behind a large sliding door stage right. There is no mezzanine level opposite the fly floor; please note this makes hoisting of flying bars very challenging. If drapery, set pieces or practicals (etc) fly during performances it is strongly suggested that the hoist adjacent are gidded.

Power

Double gang locally RCD protected 13amp sockets are distributed throughout the space on both AVB and SIB panels
--

Sound equipment

The Bloomsbury Theatre PA is an EMAcoustics HiLo Compact system. The standard configuration is based

Most of house lighting has are also located on the walkways in the gentries, around the balcony fascia, and on the underside of the circles & seating areas. All FCH lighting positions have an SWL of 45kg per linear meter.

There are three 750G rated strong beams downstage of the proscenium arch for the installation of PA. The centre point is used for the house PA.

The grid is not rated and we cannot rig any temporary suspension points from it (such as for motos).
