

## **Grammatical encoding of shared knowledge: towards a cross-linguistic typology**

Eva Schultze-Berndt, Henrik Bergqvist and Karolina Grzech

Recent cross-linguistic research has brought to light much information about grammaticalised intersubjectivity, i.e. the grammatical T /Frkqvi o2-1.9( 1)-9.( sh /F)2reimta 9o1a aor (o1)3.hqvich

A theoretical account of the above-mentioned domains which is supported by these empirical findings defines evidentiality as *mode* of access to a proposition (Michael 2008; Plungian 2010), while marking of shared knowledge – and of its counterpart, epistemic authority – concerns the *distribution* of access (e.g. Bergqvist 2018; Evans et al. 2018a:116). Thus, we not only demonstrate that shared knowledge and joint perception are cognitively salient notions across languages and cultures, but also contribute empirical data to the debate on what constitutes common knowledge and common ground.
